SDN Certification: The Next Job Requirement

With the rapid adoption of SDN into enterprise infrastructures, the demand for trained engineers, developers, and sales and marketing professionals in this space has increased significantly.

To meet this increased demand, Open Networking Foundation (ONF) has developed the **ONF-Certified SDN Professional (OCSP) Program** to provide a strong foundation of vendor-neutral knowledge and skills validation of foundational concepts and advanced technical components, complementing vendor-specific certifications in SDN.

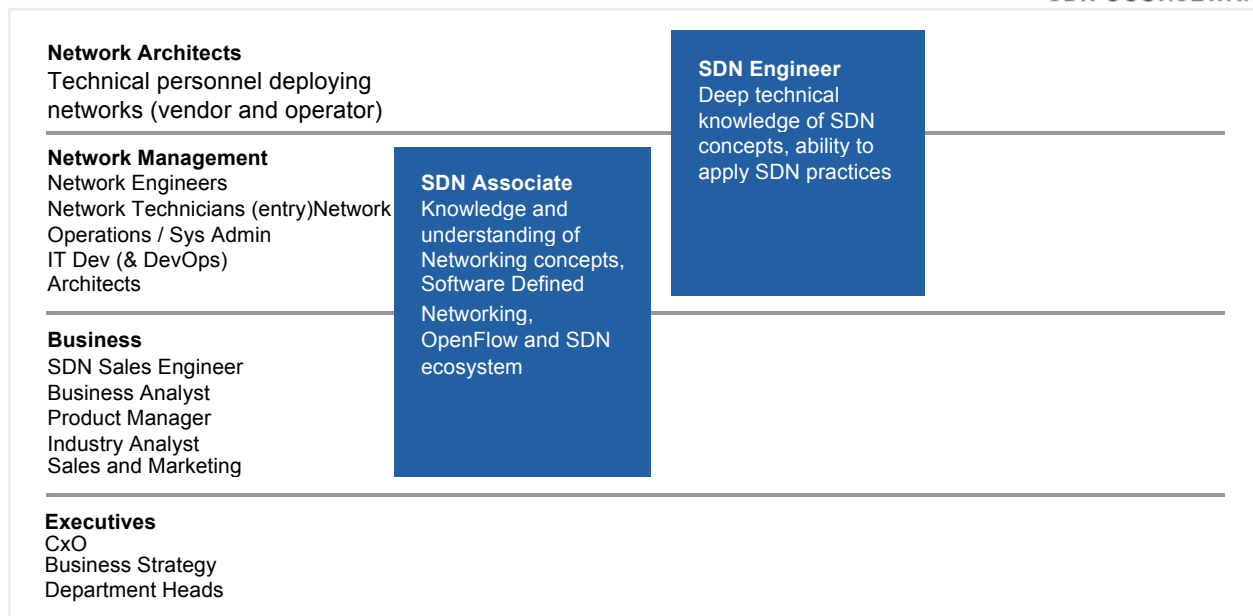

SDN Certification

SDN Courseware and Exams Available at Ecode Networks

Ecode Networks, the leading provider of SDN Orchestration Engine, and the Open Networking Foundation (ONF), a non-profit organization dedicated to accelerating the adoption of open Software-Defined Networking (SDN), partnered to offer exam for the ONF-Certified SDN Associate (OCSA) and ONF-Certified SDN Engineer (OCSE) certificates developed as part of the ONF-Certified SDN Professional (OCSP) Program.

Targeted Learning Across Organizations

Become an ONF Certified SDN Professional

- 1. Tap into a Growing Market:** Verizon Named 2016 “The Year of SDN”. Research by SDX Central estimated the Total Addressable Market for SDN is expected to grow to an estimated \$132 Billion by 2020. (Source: SDN and NFV Market Size Report 2015 by SDX Central)
- 2. Network Engineers Need It:** Deployment of SDN is happening! The market is looking for a vendor-neutral, technology-inclusive training and an exam to validate the skills of network engineers. And vendor-specific network engineers are looking to future-proof their careers. Vendor-specific AND vendor-neutral skills are essential for success in SDN.
- 3. Help Organizations to Transition to SDN:** The networking mindset needs to change when SDN is deployed. With training, you facilitate organizational skill-set migration.
- 4. Increasing respect for Vendor Neutral Certification in the Industry:** Vendor-neutral certifications validate the candidate’s unbiased knowledge of technology principles. He/ she is more likely to respond better in a multi-vendor environment having gone through training in a technology-inclusive program, which focuses more on the methodology and technology than a specific brand or software.
- 5. Upselling and Cross-Selling Opportunity:** Your existing learner base in networking management, development and operations will benefit from SDN training and certifications. You can develop a learning path to connect SDN with related domains of Cloud Computing, Virtualization, Open Stack and DevOps.

Product Components:

Ecode Networks SDN Associate and SDN Engineer training solutions come with

Classroom Courseware

- ONF Approved Course Content
- ONF Certified Trainers
- Corporate Trainings
- Personal Trainings
- Hands-On exposure

Course Content

- SDN Concepts
- Open Flow
- SDN Architecture & Ecosystem
- Open-Source SDN

Goal Setting

- Prepare for the Changing Environment
- Explore New Job Opportunities
- Stand Out in the Crowd
- Disrupt, Innovate & Develop
- Create history, not just code or configuration

Live Projects

- Opportunity to work with LIVE projects
- Get insight of how SDN is changing the networking world
- Great combination of academia & industry professionals in the training panel
- Explore real-life SDN use cases and solve the real world problems

Eager to Get Started?

Ecode Networks delivers measurable business values to training providers around the world. Save content costs and enjoy streamlined processes, marketing intelligence and enablement, operational support and delivery readiness, accreditation and exam services.
